                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Š. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  which is a membrane protein, coupled to quantize nucleotice binding or proteins (G-proteins), and has been closed by PCR amplification of human genomic DNA, using primers based on the 3rd and 6th transmembrane domains of the Xenopus sequence (T09947), then so repending of a human brain cDNA library. The genomic sequence has an intron of about 9.0 kb in the 1st cytoplasmic loop region. Intron PCR with primers T09953-54 and 43 human-rodent somatic coll hybrids has been used to localize the human MNTPIB gene to chromosome 11q21-22. Primers T09955-56 and probe T09961 have been used to analyse tissue distribution. Receptor fragments which interact with melatonin, or specific antibodies, may be used as interact with melatonin, or specific antibodies, may be used as interact disorders, to control cyulation, or in alteration of chromosomes, to control cyulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding high affinity melatonin receptor one - used to identify receptor agonists or antagonists e.g. for regulating circadian rhythm disorders or reproductive cycles

The invention provides materials for screening for a substance showing affinity for a melatonin receptor protein, which comprises an animal cell containing an expression plasmid for the gene encoding a human melatonin receptor protein. The cells are useful for screening for human melatonin receptor proteins and its agonist or anigonist e q hormones and synthetic compounds, by measuring changes in metabolic activity. The recombinant human melatonin receptor protein is useful as it has the same activity as natural human melatonin receptor protein. The new screening method is better than prior art radioimmunoassay techniques at quantitatively determining melatonin, which uses antibodies produced by linking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1053 RP: 219 A: 312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Examples; Fig 2; 24pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Frequency which is a membrane protein, coupled to guanine nucleotide binding proteins (0-proteins). The gene has been cloned by polymerase chain reaction amplification of human genomic DNA, using primers derived from the xenopus laevis melatonin receptor sequence (10947), and use of the product as a probe to obtain clone T09949. Screening of a human hypothalamus cDNA library has resulted in isolation of the full-length clone. Primers T0995-56 amplify a lag to the table of the full-length clone. Primers T0995-56 amplify a language the tissue distribution of this gene for comparison with the molatonin-lb receptor gene (10995). Receptor fragments which interact with melatonin, or specific antibodies, may be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        receptor-agonists or receptor antagonists. Agonists may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in homacs. The receptor gene may also be expressed in a transgenic animal for use as a model system to serve agenists and untagonists.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ĵ.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           arritrontuguituustesaaniasitatissusuutgi ja toji narnarnarsyttaaasyt 176                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     C
                                                                                         This sequence represents the coding sequence for the human melatonin receptor protein. This sequence is used in an expression vector beignated parks. MacIFT. The expression control is used to produce the chinese hamster evary (CHO) cells of the invention. The CHO cells express the human melatonic threshold and antagonists and to used to identify compounds (such as agonists and antagonists) having affinity to the melatonic receptor agonists on also be used as an agent for preventing or treating jet lag, sleeplessness, seasonal melanocholia. Altheimer's disease, dementia caused by cerebral thrombosis, various diseases, receptor and this head pressure, caused as an agent for preventing or treating jet lag, sleeplessness, sassonal melanocholia. Altheimer's disease, dementia caused by cerebral thrombosis, various diseases, receptor and also be used as an exclusive regulator. The melatonic investor can also be used as an exclusive regulator. The
                               melationin receptor antagonist can be used as an agent for provent treating melancholia, neurosis, or mental confusion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Succeptional human melaterin receptor protein and (ant)aganists used for treating jet lag, Alzheimer's disease, melancholia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            jet lag: sleeplessness: seasonal melancholia: Alzheimer's diseaso:

                                                                                           transcription-polymerase chain reaction amplification of sheep pars ubcralis mPNA, using primers derived from the Yangeus lawyis melatonin receptor sequence (T0094), and use of the product as a probe on a sheep pars tuberalis cDNA library and a sheep genomic library, to obtain the complete sequence as a hybrid fusion with a 5'-genomic sequence and a 3'-cDNA sequence. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor-agonists or receptor-attagonists. Agonists may be used in the thought of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control cyulation, or in alteration of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   melatonin receptor-agonist; melatonin receptor-antagonist; circadian rhythm disorder; jet-lag; day-night cycle disorder; ovulation; reproductive cycle; animal breeding; puberty; antibody; transgenic animal; drug screening; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T09948 standard;
                                reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic animal for use as a model system to screen agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                         DNA encoding high affinity melatonin receptor one - used to identify receptor agonists or antagonists e.g. for regulating circadian rhythm disorders or reproductive cycles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ovis aries

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      mpNA The corresponding genomic DNA consists of 2 exons divided by a large (over 8 kb) intron. The 3'-untranslated region is 444 bp long, and includes the polyadenylation signal AUUAAA. A major transcription start site is located about 100 bp upstream of the initiation codon. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor agonists or receptor-randomists. Agonists may be used in therapy of circadian rhythm discreters such as jet lag or day night cycle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 melatonin receptor agenist: melatonin receptor antagonist;

                                                                                                                                                                              This DNA sequence comprises the gene coding for mouse melatonin la (Mella) receptor (see W23959). A 466 bp fragment of the gene was closed from genemic onta by PCZ, and was used to probe a RALB/c adult mouse liver EMBUS SP6/T7 genomic library to isolate the Mella receptor gene promoter (II) comprises a functional melatonin la receptor gene promoter (II) linked to a reporter cells exitability (I) are used to screen oppounds (A) for ability to alter transcription from (II) (claimed). (A) that are activators are useful for treating circadian rhythm disorders in humans (e.g. jet lag, sleep-wake disturbances in the blind or regulation of evarian cyclicity) and for control of the reproductive cycle in seasonally breeding animals, while those that are inhibitors are used to control initiation and timing of puberty in humans. Screening for (A) can now be done in cultures of transformed cells which do not naturally express the receptor (which system) and to a few specific sites in the central nervous

                                                                                                                                                                                               melatonin receptor MELIA. The sequences encode proteins which are 65 amino acids shorter than those described in the prior art. This sequence is a short form of the novel receptor MELIAb also known as Meliable to the solution (The Sequence is a short form of the novel receptor MELIAb also known as Meliable to the solution (The Meliable to the short form (T9066), the difference occurs in the 3' untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The MELIAb sequence also differ from Frank MELIA receptor sequences by 6 amino acids. The nucleotide sequence was isolated from cDNA derived from Meliable to the mRNA meliable to the manufacture of the manufacture of the modulate intracellular sequence encodes a protein which is a 7 transmenterior receptor involved in cellular signalling. MELIAb has been shown to modulate intracellular cSMP, esp. inhibiting its accommutation induced inhibitor of phosphodiesterase, but unlike MELIAA (179063) cannot inhibit adaptive contacts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Allele, Xenopus laevis melatonin; receptor; untranslated region; PCR; mRNA; half-life; skin; amplification; primer; polymerase chain reaction; transmembrane domain; cellular signalling; inhibition; adenylyl cyclase; medulation; intracellular, cyclic GMP; inhibitor, phosphodiesterase; ss.
